About Me

Motivated B.Tech Computer Science student with strong foundations in Python, Machine Learning, and Web Development, seeking internship and placement opportunities to apply problem-solving skills and contribute to real-world software solutions.

Education

Vellore Institute of Technology
B.Tech Computer Science and Engineering Core
CGPA: 9.01/10 (2023–Pres.)

ASN Sr. Sec. School
Class XII (90%) — 2023
Class X (94%) — 2021

Skills

- **Languages:**
Python, Java, C++, C
- **Web:**
HTML, CSS, Flask
- **Core CS:**
DSA, OOP, DBMS, OS
- **Tools:**
Git, Github, VS Code, Docker
- **Soft Skills:**
Public Speaking, Teamwork

Achievements

- Machine Learning Certificate - Google / Smartbridge
- GDSC Hackathon '24

Clubs & Interests

VIT-Stellar (Club)
Senior Core Member

Interests:
Reading, Drawing, New Technologies

Internship

Machine Learning Internship — SmartBridge x Google
May–Jun 2025

- Applied ML algorithms on real-world datasets for classification tasks.
- Gained hands-on experience in model building and deployment.
- Strengthened Python ML workflows and documentation.

Projects

- **Online Payment Fraud Detection (Python, Flask, ML)**
 - Developed an ML-powered web application to classify and flag fraudulent transactions.
 - Achieved **F1-score 0.89** with **93% precision** and **86% recall**, detecting **2,073 frauds** with minimal false positives.
 - Implemented data preprocessing, model inference, and real-time prediction via Flask APIs.
- **TubeMind (Python, AI)**
 - Built a local AI-based video analysis platform using **FastAPI** and **Celery**.
 - Designed a multi-modal **RAG pipeline** with PostgreSQL + pgvector for context-aware Q&A.
 - Optimized inference workflows using **Redis** and **Docker**, skipping redundant video frames.
- **Hotel Management System (Python, Flask)**
 - Designed and developed a hotel management system from scratch, starting as a **Python CLI** tool.
 - Implemented core modules for check-ins/check-outs, billing, and room availability tracking.
 - Extended the system into a **Flask-based web application** with structured backend logic.
- **Parking Lot Management System (C++)**
 - Designed and developed a parking lot management system from scratch using C++.
 - Implemented efficient data structures for vehicle allocation, fast search, and availability tracking.
 - Applied object-oriented design principles to ensure modularity and efficient memory usage.
